

Green Edge Amundsen

# Comments

- Sentinel-1 imagery is still unavailable. The Sentinel-1 images on <http://gliders.takuvik.ulaval.ca/ice/S12/> (S1-\*.tif) don't contain any data in the region of interest. I would not recommend downloading them.
- The Sentinel-2 mosaic image of June 26<sup>th</sup> on <http://gliders.takuvik.ulaval.ca/ice/S12/> (S2-2016-06-26-70-61-50.tif, 471 MB) contains less cloud-free data in the region of interest comparatively to the Sentinel-2 image of June 20<sup>th</sup> because of clouds. I would not recommend downloading the image of June 26<sup>th</sup> if you already have either the Sentinel-2 mosaic image of June 20<sup>th</sup> or the subset of June 21<sup>st</sup>.
- I would recommend the subset of June 21<sup>st</sup> instead of the subset of June 20<sup>th</sup> because the subset of June 21<sup>st</sup> contains all the region of interest for G 400 stations.
- Note that the Sentinel-2 mosaic image subset of June 21<sup>st</sup> (198 MB) is still available on the FTP server of Québec-Océan.
